- 1. A method of analysing an image comprising performing a Hough transform on points in an image space to an n-dimensional Hough space, selecting points in the Hough space representing features in the image space, and analysing m of the n variables for the selected points, where m is less than n, to derive information about the features in the image space.
- 2. A method as claimed in claim 1 comprising detecting points for the Hough transform using feature detecting means such as edge or corner detecting means or colour feature detecting means.
- 10 3. A method as claimed in any preceding claim wherein the analysis of the m variables for the selected points involves analysing relationships between the selected points.
 - 4. A method as claimed in any preceding claim wherein the Hough transform is for detecting lines and maps a point (x,y) in image space to points (r, θ) in Hough space.
 - 5. A method as claimed in claim 4 wherein the analysis of the selected points involves analysing the values of θ .
 - 6. A method as claimed in any preceding claim wherein the step of selecting points in the Hough space involves identifying local peaks and comparing the local peaks with a threshold.
 - 7. A method as claimed in claim 6 wherein the threshold is based on random reference images, preferably having similar statistical properties to the image being analysed.
- 8. A method as claimed in any preceding claim wherein the analysis of the selected points is for identifying man-made structures and/or for distinguishing between urban/non-urban areas.
 - 9. A method of generating a threshold for identifying features in a subject image using the Hough transform, the method comprising generating a plurality of random reference image regions, for each reference image region performing a Hough transform and deriving a histogram of accumulated

values in Hough space, combining the histograms for the reference images, and using the combined histograms to derive a threshold.

- 10. A method as claimed in claim 9 wherein the reference image regions have similar statistical properties to the subject image.
- 5 11. A computer program for executing a method as claimed in any one of claims 1 to 10.
 - 12. A computer-readable medium storing a computer program as claimed in claim 11.
- 13. Apparatus adapted to perform a method as claimed in any one of claims 1 to 9.
 - 14. Apparatus as claimed in claim 13 comprising means for processing image signals, means for performing a Hough transform, means for selecting points in the Hough space representing features in the image space, and means for analysing m of the n variables for the selected points, where m is less than n, for information about the features in the image space.
 - 15. Apparatus as claimed in claim 13 or claim 14 comprising image input means.
 - 16. Apparatus as claimed in any one of claims 13 to 15 comprising image display means.
